PROFILE

To perceive a career in a renowned firm with dedicated efforts and to associate myself with an organization that gives me a chance to update my knowledge.

PROJECTS

Automate Email Typing Using Bot

Python and Google assistance

- The growth in digital technology has given immense opportunity to visually impaired persons. The proposed work aims to develop a mechanism which converts Speech to Text(STT) for email composing and also converts Text to Speech(TTS) for reading emails.
- Google web kit API(Application Programming Interface) is used in this application for speech recognition.

Smartstack:Streamlining library Organization with Automated Book Tracking

PHP and IOT kit

- Use RFID Tags : Attach RFID tags to each book to keep track of them accurately.
- Install Ultrasonic Sensors : Set up ultrasonic sensors to help locate books and prevent them from getting misplaced.
- Combine Both Technologies : Use both RFID tags and ultrasonic sensors together to make sure books are indexed correctly and minimize mismatches.

Cafe Management

Angular and Java

- Implemented a comprehensive café management solution utilizing Angular for the front-end and Java for the back-end.
- Designed and developed the user interface with Angular, ensuring a responsive and intuitive experience, while leveraging Java for robust server-side processing and database interactions.
